

VSM LAUNCHES THE WARNESS – JAN 2008

Vancouver Supermoto (VSM) is a leading innovator in street legal supermoto and race performance tuning. Dissatisfaction with the lack of selection, performance and functionality of the dual sport market pushed the founders of VSM to create the Warness (TM).

The Warness (TM) is comprehensive power distribution that provides multi-functional flexibility and performance. The real excitement is not only in the dirt, but on the street. Before the Warness, supermoto riders had only limited choices in dual sport kits with 90's style and features for their late model dirt bikes. Now the Warness provides the rider with digital telemetry of their machines.

Designed and developed in the summer of 2007 to satisfy the growing demand of supermoto in North America, the Warness is distributed worldwide for even broader applications.

Race performance tuning is an art, as well as, passion.

As supermoto racing begin to take flight Vancouver, VSM anticipates a sharp increase in popularity not only in BC but in all of Canada in 2009. Only after one year, VSM has put "supermoto in Vancouver" on the map. Now the largest distributor of supermoto parts in Canada, riders across North America are building and racing VSM bikes. Here at home, every bike built by the local Vancouver shop is unique to the rider's requirements and specifications. It all comes down to one thing: these guys love what they do and it shows.
